PRELIMINARY AMENDMENT

S I R:

follows:

Prior to examination of the above-identified application, amend the application as f

IN THE SPECIFICATION:

Please replace the paragraph beginning at page 7, line 2, with the following rewritten

paragraph:

--The invention is based, at least in part, on the discovery that meiotic spindles in living mammalian oocytes, in particular living human oocytes, can be imaged non-invasively and without damage. In one embodiment, imaging of oocytes is achieved using an orientation-independent polarized light microscope referred to herein as a "polscope". The polscope uses digital image processing to improve sensitivity, and nearly circularly polarized light combined
